

The Major CPU Exceptions in EPV - Part 2

Fabio Massimo Ottaviani – EPV Technologies

April 2014

EPV provides many exceptions in order to help customers identify anomalies, performance issues and excessive resource consumptions. In this document we will concentrate on the CPU related exceptions providing explanations, examples and recommendations which could help you reduce the CPU usage.

Most of the exceptions discussed here are also produced for zAAP and zIIP.

However the main focus will be on the CPU which is still the major driver cost in any z/OS environment.
